Nebraska SAS User Group 2013 One-Day Conference

Pope Gregory XIII in the Papal bull  
*Inter gravissimas*  
reformed the calendar giving us what is known  
as the Gregorian Calendar.

This replaced the Julian Calendar which had  
been in effect since 45 BC.

### What is a SAS date variable?

- 15 May 2012

```
1 data _null_;  
2   toDay = "15MAY2012"d;   
3   put toDay= /   
4     toDay= yymmdd10. /   
5     toDay= worddate23.;  
6 run;
```

← Date Constant  
← Date Display

toDay=19128  
toDay=2012-05-15  
toDay=May 15, 2012

Nebraska SAS User Group 2013 One-Day Conference

### What is a SAS date variable?

- 15 May 2012
  - The underlying data representation (**19128**) is independent of its visual representation (**2012-05-16, May16, 2012**, etc).
  - What is 19128?
    - The number of days from January 1, 1960

```
1960-01-01 == 0  
1960-01-02 == 1  
1960-01-03 == 2  
...  
2012-05-15 == 19128
```

Nebraska SAS User Group 2013 One-Day Conference

## What is a SAS date variable?

- 15 May 2012
  - The underlying data representation (**19128**) is independent of its visual representation (**2012-05-16**, **May16, 2012**, etc).
  - **What is 19128?**
    - The number of days from January 1, 1960
      - 1960-01-01 == 0
      - 1959-12-31 == -1
      - 1959-12-30 == -2
      - ....
      - 1592-10-15 == -137774
      - 1592-10-04 == **-137785**

Nebraska SAS User Group 2013 One-Day Conference

## What is a SAS datetime variable?

- 16 May 2012 @ 9:30 am
- What is 1652779800?
  - The number of seconds since January 1, 1960 @ midnight
  - Datetime variables are floating point numbers (can contain partial seconds)

Copyright 2013 Peter Blankenship, Fernwood Consulting Group Inc. #mwsug

---

---

---

---

---

---

---

---

---

Nebraska SAS User Group 2013 One-Day Conference

## What is a SAS time variable?

- 9:30
  - **What is 34200?**
    - The number of seconds since midnight
    - Time variables are floating point numbers (can contain partial seconds)

Copyright 2013 Peter Blankenship, Fernwood Consulting Group Inc. #mwsug

---

---

---

---

---

---

---

---

Nebraska SAS User Group 2013 One-Day Conference

## The underlying data representation

- **18613**
- **1608197400**
- **34200**

is independant of its visual representation

- **2010-12-17, December 17, 2010**
- **17DEC10:09:30:00, 17DEC10:09:30:00.0**
- **9:30:00, 9:30:00 AM**

Copyright 2013 Peter Blankenship, Fernwood Consulting Group Inc. #mwsug

---

---

---

---

---

---

---

---

Nebraska SAS User Group 2013 One-Day Conference

## SAS Formats

Visual representation of SAS date, datetime, and time variables is controlled through SAS formats

- Numerous built-in SAS formats for dates
- Fewer built-in SAS formats for datetime and time variables
- PROC format
  - Create custom formats

Copyright 2013 Peter Blankenship, Fernwood Consulting Group Inc. #mwsug

---

---

---

---

---

---

---

---

Nebraska SAS User Group 2013 One-Day Conference

## SAS Informat

- “mirror image” of formats
  - Turn a visual representation into the underlying data representation

Copyright 2013 Peter Blankens, Fernwood Consulting Group Inc. #mwsug

---

---

---

---

---

---

---

---

Nebraska SAS User Group 2013 One-Day Conference

## SAS Informat

```
data _null_;
  input toDay          yymmdd10.  +1
        tomorrow      date9.     +1
        toDayDT       datetime16. +1
        morning        time5.;
  put toDay= tomorrow= toDayDT= morning=;
datalines;
2010-12-17 18dec2010 17DEC10:09:30:00 09:30
2010-12-18 19dec2010 17DEC10:19:30:00 21:30
;;
run;
```

Copyright 2013 Peter Blankens, Fernwood Consulting Group Inc. #mwsug

---

---

---

---

---

---

---

---

Nebraska SAS User Group 2013 One-Day Conference

## SAS Informat

```
put toDay= tomorrow= toDayDT= morning=;
```

```
2010-12-17 18dec2010 17DEC10:09:30:00 09:30
2010-12-18 19dec2010 17DEC10:19:30:00 21:30
```

```
toDay=18613 tomorrow=18614 toDayDT=1608197400 morning=34200
toDay=18614 tomorrow=18615 toDayDT=1608233400 morning=77400
```

Copyright 2013 Peter Blankens, Fernwood Consulting Group Inc. #mwsug

---

---

---

---

---

---

---

---

Nebraska SAS User Group 2013 One-Day Conference

## Functions

- `date()/today()`  
– Returns the current date

```
data _null_;  
  td = today();  
  dt = date();  
run;
```

Copyright 2013 Peter Blankenship, Fernwood Consulting Group Inc. #mwsug

---

---

---

---

---

---

---

---

Nebraska SAS User Group 2013 One-Day Conference

## Functions

- `date()/today()`  
– Useful to capture the run date for a report

```
38 %let titledate = %sysfunc(today(), yymmdd10.);  
39 %put titleDate= &titledate;  
titleDate= 2010-12-17
```

```
footnote1 "Produced on &titledate";
```

Copyright 2013 Peter Blankenship, Fernwood Consulting Group Inc. #mwsug

---

---

---

---

---

---

---

---

Nebraska SAS User Group 2013 One-Day Conference

## Functions

- `time()`  
– Returns the current time

```
data _null_;  
  now = time();  
run;
```

Copyright 2013 Peter Blankenship, Fernwood Consulting Group Inc. #mwsug

---

---

---

---

---

---

---

---

Nebraska SAS User Group 2013 One-Day Conference

## Functions

- `time()`
  - Returns the current time

```
40 %let titledate = %sysfunc(date(),date9.);
41 %let titletime = %sysfunc(time(), timeampm.);
42 %put titleDate= &titledate titletime= &titletime;
titleDate= 17DEC2010 titletime= 9:30:34 PM

footnote1 "Produced on &titledate at &titletime";
```

Copyright 2013 Peter Blankenship, Fernwood Consulting Group Inc. #mwsug

---

---

---

---

---

---

---

---

Nebraska SAS User Group 2013 One-Day Conference

## Functions

- `datepart()`
  - Returns the datepart of a datetime variable

```
data fromSQLServer;
set sql.dataTable;
sasDate = datepart(sqlDate);
drop sqlDate;
format sasDate yymmdd10.;
run;
```

Copyright 2013 Peter Blankenship, Fernwood Consulting Group Inc. #mwsug

---

---

---

---

---

---

---

---

Nebraska SAS User Group 2013 One-Day Conference

## Functions

- `timepart()`
  - Returns the time part of a datetime variable

```
data fromSQLServer;
set sql.dataTable;
sasTime = timepart(sqlDate);
drop sqlDate;
format sasTime timeAMPM.;
run;
```

Copyright 2013 Peter Blankenship, Fernwood Consulting Group Inc. #mwsug

---

---

---

---

---

---

---

---

Nebraska SAS User Group 2013 One-Day Conference

## Functions

- `day(dateVar)`
  - Returns the day (1 – 31) of a SAS date variable
- `month(dateVar)`
  - Returns the month (1 – 12) of a SAS date variable
- `year(dateVar)`
  - Returns the year of a SAS date variable
- `qtr(dateVar)`
  - Returns the quarter (1 – 4) of a SAS date variable

Copyright 2013 Peter Blankenship, Fernwood Consulting Group Inc. #mwsug

---

---

---

---

---

---

---

---

Nebraska SAS User Group 2013 One-Day Conference

## Functions

- `mdy(mm, dd, yy)`
  - Returns a SAS date from the three integer variables for month (mm), day (dd), and year (yy) input
- `hms(hh, mm, ss)`
  - Returns a SAS time variable for the three variables hour (hh), minute (mm), and second (ss). The seconds input can be floating point
- `dhms(date, hh, mm, ss)`
  - Returns a SAS date time variable from the four variables for date, hour, minute, and second

Copyright 2013 Peter Blankenship, Fernwood Consulting Group Inc. #mwsug

---

---

---

---

---

---

---

---

Nebraska SAS User Group 2013 One-Day Conference

## Functions

- `intck()`
  - Returns the count of the number of interval boundaries between two dates, two times, or two datetime values
- `intnx()`
  - Increments a date, time, or datetime value by a given time interval, and returns a date, time, or datetime value.

Copyright 2013 Peter Blankenship, Fernwood Consulting Group Inc. #mwsug

---

---

---

---

---

---

---

---

Nebraska SAS User Group 2013 One-Day Conference

## Functions

- Interval
  - Character value
  - Common values are (not case sensitive):
    - 'day'
    - 'week'
    - 'month'
    - 'year'
    - 'qtr'

Copyright 2013 Peter Blankenship, Fernwood Consulting Group Inc. #mwsug

---

---

---

---

---

---

---

---

Nebraska SAS User Group 2013 One-Day Conference

## Functions

- Boundary
  - starting point for each interval
    - 'day'
    - 'week'      sundays
    - 'month'      first of the month
    - 'year'      Jan 1
    - 'qtr'      Jan 1, Apr 1, Jul 1, Oct 1

Copyright 2013 Peter Blankenship, Fernwood Consulting Group Inc. #mwsug

---

---

---

---

---

---

---

---

Nebraska SAS User Group 2013 One-Day Conference

## Functions

- intck('interval', start, end)
  - start: can be date, time, or datetime
  - end: must be same type as start

Copyright 2013 Peter Blankenship, Fernwood Consulting Group Inc. #mwsug

---

---

---

---

---

---

---

---

Nebraska SAS User Group 2013 One-Day Conference

### Functions

- intck('interval', start, end)

```
43 data _null_;  
44     start = '01jan2010'd;  
45     end = '01jul2010'd;  
46     days1 = end - start;  
47     days2 = intck('day', start, end);  
48     weeks = intck('WEEK', start, end);  
49     months = intck('month', start, end);  
50     year = intck('year', start, end);  
51     put days1= days2= weeks= months= year=;  
52 run;
```

days1=181 days2=181 weeks=26 months=6 year=0

---

---

---

---

---

---

---

---

Nebraska SAS User Group 2013 One-Day Conference

## Functions

- `intnx('interval', start, increment <, 'align'>)`

- Increment: is number of intervals to add
  - Can be negative
- 'align': controls position of the resultant date within the interval. Optional
  - 'beginning' ('b')
    - This is the default
  - 'middle' ('m')
  - 'end' ('e')
  - 'same' ('s')

Copyright 2013 Peter Ehrenk, Fernwood Consulting Group Inc. #mwsug

Nebraska SAS User Group 2013 One-Day Conference

In China, one of traditional activities at the Chinese New Year's Eve is people gather together at temples and wait for the bell to ring 108 times. People believe this can expel unhappiness and bring good luck in the New Year.

Why the bell is struck 108 times? It was recorded in the "Manuscript of Seven Categories" made during the Ming Dynasty that 108 times of striking the bell was equivalent to one year, as there were twelve months, twenty-four Qi (solar terms) and seventy-two Hou ( $12+24+72=108$ ).

In the ancient system of timekeeping, five days were called a Hou (pentad), and six Hou made up a month, so there were seventy-two Hou periods in one year, therefore the number 108 was calculated according to these time measurements
